Web3 Flight Distribution

The Organizer

Lufthansa Systems and SWISS are organizing this hackathon leveraging the L1 blockchain Camino Network solutions for the travel industry.

The Goal

Revolutionize travel distribution and sourcing by connecting Lufthansa Group content through the Camino Messenger, running on/leveraging the L1 Camino Network, and enabling on-chain transactions at the moment of booking.

The focus is on Search-Price-Book-Pay-Issue transactions. Each team's approach will shape specific use cases, including integrating additional services or new technologies, such as AI agents. The two days long hackathon will end in a team pitch event.

The Network

Camino Network, initiated by Chain4Travel, is a blockchain-based travel ecosystem designed to connect industry partners, enabling secure, efficient, and decentralized transactions.
