

Proof of contribution to climate protection

The companies in the ISO-Gruppe are committed to responsible corporate governance with a particular focus on sustainability and climate protection. As part of our business activities, we systematically record and balance our greenhouse gas emissions at Group level in accordance with internationally recognized standards.

For the 2024 fiscal year, the ISO-Gruppe reports total emissions of 197.11 metric tons of CO₂ equivalents (CO₂e) within the established reporting limits, covering all relevant emission sources:

- **Scope 1 (direct emissions):** 124,09 t CO₂e
- **Scope 2 (indirect emissions from energy procurement):** 64,41 t CO₂e
- **Scope 3 (other indirect emissions):** 8,61 t CO₂e

In addition to our measures to reduce our own emissions, the ISO-Gruppe supports a verified climate protection project through CO₂ credits. This is the "Clean drinking water for schools in Africa, Kenya" project (see also page 3), which has demonstrably saved 197 tons of CO₂e. The corresponding CO₂ certificates were irrevocably retired and withdrawn from the market.

Through this measure, we offset the emissions we generate while simultaneously promoting sustainable development goals. The ISO-Gruppe is thus sending a clear signal in favor of a responsible and forward-looking corporate policy that fully complies with the requirements of public contracting authorities.

Information on the climate protection project "Clean drinking water for schools in Africa, Kenya"

The climate protection project supported by the ISO-Gruppe helps improve the drinking water supply and sanitary conditions at schools in Kenya. By providing clean drinking water sources at schools, the project not only reduces greenhouse gas emissions but also promotes health, education, and sustainable development in the local community.

Project goals

- Reduction of CO₂ emissions through sustainable water extraction without boiling
- Saving firewood and thus reducing air pollution
- Improving hygiene conditions for over 40,000 schools and more than 16 million pupils
- Expansion of supply to over 100,000 schools by the end of 2025

By supporting this project, the ISO-Gruppe is making an efficient and targeted contribution to climate protection and sustainable development in one of the most affected regions.
